Target version:	v2.0.0 - Post-Migration Issues	Spent time:	0.00 hour
Easy Pickings:			

Description

Make a subscription that pings the server and gets the current version back. Then it can compare the running version of the client and ask the customer to refresh the page.

This will let's us upgrade client with API breaking changes.

Maybe we want to version the API separately from the application? Or make customers upgrade after all changes regardless if they include breaking API changes.
