[#1665] Add Search Keywords to Products

Extend the Products database model to store a `keywords` String. This field can contain additional words that will be searched from the site's frontend, but will not show up in the description.

Modify the Admin's Product form to render & process a Search Keywords input field. Modify the add/edit Product API routes to decode an optional `keywords` field in the Product Data, defaulting it to the empty string if not present.

Closes #1665
